

# SelectH2 mini

## Leakage Detector, air conditioning

Selective hydrogen gas detector for effective and environmentally friendly leak detection in air-conditioning and cooling systems using forming gas. The SelectH2 is fitted with two highly sensitive sensors. With the SelectH2 mini you now have a time-saving and environmentally sustainable alternative solution, which can be used for testing even large HGV and bus air-conditioning systems economically. The forming gas 95/5 (95% nitrogen, 5% hydrogen) is also used as inert gas in welding and is generally readily available from any gas retailer. The leak detection method using forming gas also complies fully with directive 2006/40/EU on emissions from air condi-

tioning systems in motor vehicles. The manufacturer recommends annual calibration to guarantee the high precision of the device in the long term.

- maximum hit rate even with the smallest leaks
- recognise defective heat exchangers even without removing the dashboard
- only reacts to hydrogen and therefore prevents misdiagnoses due to oil and petrol vapours
- automatic zero-point calibration in fresh air
- plastic case with cushioned lid and gas-free insert (important for storage)

**Long gooseneck:** 320 mm  
**Gauge:** with illuminated LCD display  
 with battery status indicator  
**Housing Type:** Synthetic Material Housing  
**Required appliance battery:** Nickel Metal Hydrid Battery (NiMH)

**WxHxD:** 44 x 170 x 40 mm  
**Info:** with integrated work light  
 with charger  
 with acoustic alarm  
 with case

**Workshop Equipment:** for measurement of the hydrogen concentration
