

Testing Unit, towbar socket

This testing unit is used to simplify the checking of an ISO7638 (ABS/EBS) socket on the towing vehicle and the coiled cable between the towing vehicle and trailer for short circuits or cable breaks. The test result is displayed using LEDs attached to the device housing.

- Testing of trailer socket according to ISO 7638 on towing vehicle
- Testing of coiled cable according to ISO 7838
- Testing of communication cables

Rated Voltage:
Number of Poles:

24 V
7 terminal

DIN / ISO:
