

4B Battery-operated ultrasonic device

Ultrasound with frequency modulation – no need to connect to on-board power supply – ultrathin design

Highly effective, battery-operated ultrasonic device. Frequency modulated ultrasonic tones mimic animal fear and warning cries, signalling extreme danger to the marten. No habituation effect.

Operated with two standard 3-volt button batteries (CR2477), making it independent of the on-board power supply. Especially long operational life of approx. 24 months per battery set. Ideal for vehicles that remain parked for long periods such as classic cars, motor homes and exhibition vehicles as well as for carports.

Strongly recommended before using marten repellents – STOP&GO odour remover, item code 07503.

- › Uses 2 standard CR2477 3-volt button batteries
- › Batteries last up to 24 months
- › 2 waterproof piezo speakers
- › Dispersion radius: 360°
- › Dispersion angle: > 170°
- › Sound pressure: approx. 110 dB
- › Frequency modulation to prevent habituation
- › Function control light, blinking LED
- › Waterproof in accordance with IP65
- › E1 marking by the German Federal Motor Transport Authority (KBA)

Item code 07533 | Packaging: Folding carton
